Template structuring with prompt scoping and open-source transparency

Open Source Repository Standards and Public Visibility

- CNCF guidelines mandate that all project code and documentation repositories remain entirely public.
- Sharing incremental work openly fosters community collaboration and alternative problem-solving.

Markdown Template Formatting and Issue Structure

- Issue templates require specific front matter fields including title, labels, and repository.
- Content placed outside the front matter serves as the standard markdown description.

AI-Assisted Issue Generation and Scoping

- Bruce Hamilton discussed generating markdown issue files from assessment recommendations using AI.
- Nate Waddington suggested scoping individual tasks to 2 to 4 hours of technical writing work.
- Recommendations require selective bundling into cohesive issues to prevent repository flooding.

Project Trackers and Community Contribution Labels

- Assistance trackers incorporate documentation assessments across KubeVirt and Flatcar projects.
- Repositories utilize the help wanted label to surface documentation tasks on external contribution platforms.

Next steps

- [ ] [Nate Waddington] Automate GitHub Uploads: Implement automation to upload issue files to GitHub.
- [ ] [Bruce Hamilton] Update Template: Add front matter including title, labels, and repository fields to the issue template.

- [ ] [Nate Waddington] Add Helm Tracker: Include the Helm repository in the assistance issues tracker.
- [ ] [Bruce Hamilton] Create Issues: Generate markdown issue files based on assessment recommendations using AI.
- [ ] [Nate Waddington] Send Issue Link: Provide the link for issue 221 to Bruce as a reference for issue organization.
- [ ] [Bruce Hamilton] Share Flatcar Issues: Send the link containing the flatcar issues list to Nate.
- [ ] [Nate Waddington] Request Docs Label: Consult with Andrew regarding the creation of a documentation label.
- [ ] [Nate Waddington] Send Transcript: Forward the meeting transcript to Bruce.

Meeting records Transcript

Summary

Template structuring with prompt scoping and open-source transparency

Template Structure and Copilot Scoping
Markdown files required front matter additions. Copilot configuration restricted issue generation to specific assessment source files.

Open Source Policy and Flatcar Review
Project repositories maintained in public view. Existing documentation issues reviewed and trackers updated.

Recommendation Bundling and Help Labels
Copilot bundled related recommendations into overarching issues. Help wanted labels included for community integration.

Decisions

Needs Further Discussion

- **Addition of priority and project labels** The inclusion of priority and document-specific labels was deferred pending confirmation from Andrew.

Aligned

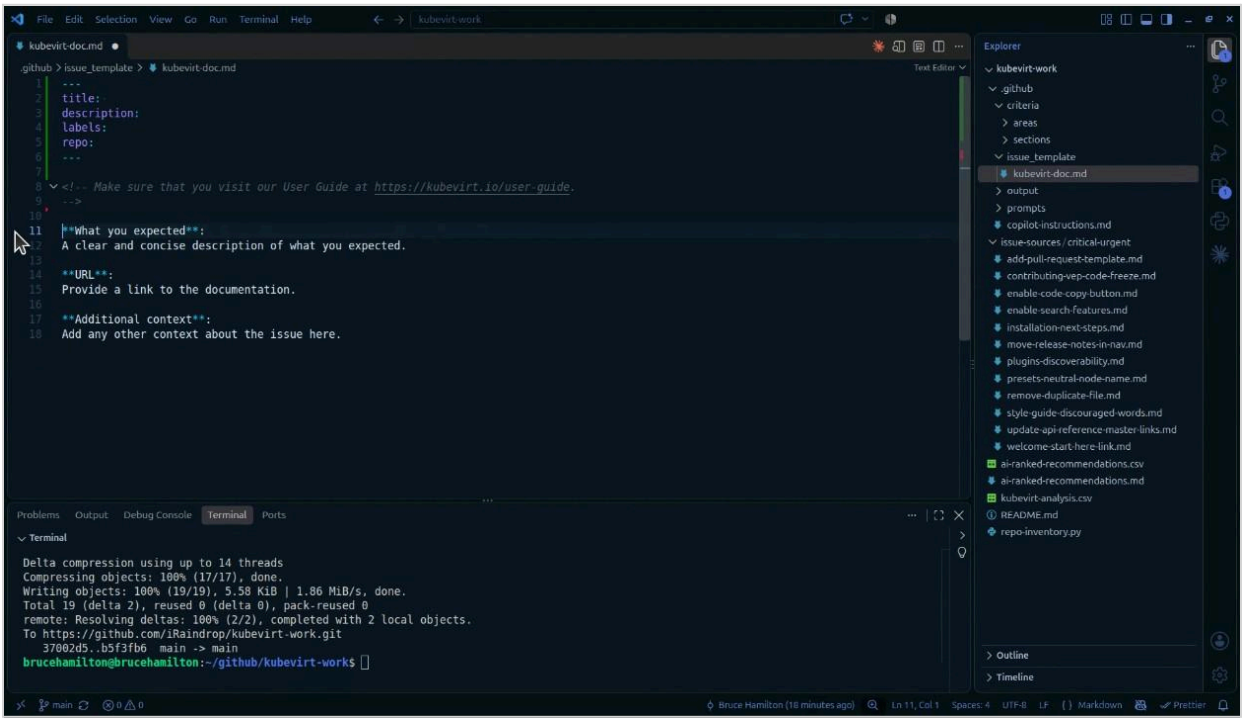

- **Front matter template structure for issues** The team aligned on including title, labels, and repo in the issue template front matter while excluding description.
- **Organization of issue priorities via labels** The participants agreed to use labels instead of separate folders to organize issue priorities.
- **Consolidation of recommendations into issues** The participants agreed not to create an issue for every recommendation, instead bundling related recommendations together.

Next steps

- ☐ [Nate Waddington] Automate GitHub Uploads: Implement automation to upload issue files to GitHub.
- ☐ [Bruce Hamilton] Update Template: Add front matter including title, labels, and repository fields to the issue template.
- ☐ [Nate Waddington] Add Helm Tracker: Include the Helm repository in the assistance issues tracker.
- ☐ [Bruce Hamilton] Create Issues: Generate markdown issue files based on assessment recommendations using AI.
- ☐ [Nate Waddington] Send Issue Link: Provide the link for issue 221 to Bruce as a reference for issue organization.
- ☐ [Bruce Hamilton] Share Flatcar Issues: Send the link containing the flatcar issues list to Nate.
- ☐ [Nate Waddington] Request Docs Label: Consult with Andrew regarding the creation of a documentation label.
- ☐ [Nate Waddington] Send Transcript: Forward the meeting transcript to Bruce.

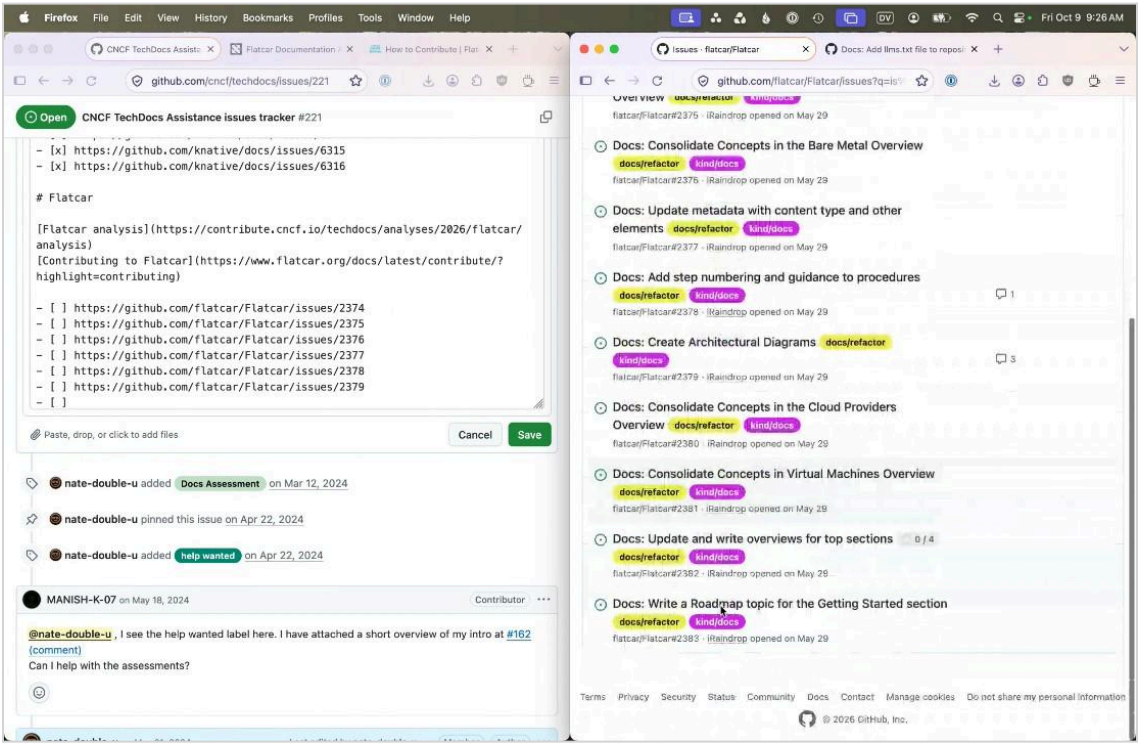

Details

KubeVirt Issue Template Structure: Bruce Hamilton displayed temporary markdown files generated by artificial intelligence, which Nate Waddington identified as a pull request template rather than an issue template (00:03:50). To prepare for automated issue uploads, Nate Waddington instructed Bruce Hamilton to add specific front matter—including `title`, `labels`, and `repo`—to the `kubevirt-doc.md` issue template file (00:06:30). Nate Waddington specified that the `description` line should be removed from the front matter because the remainder of the file functions as the description, while assignees, types, fields, projects, and milestones should be excluded to maintain simplicity (00:07:24).

AI Prompt Scoping and GitHub Issue Generation: Bruce Hamilton and Nate Waddington discussed configuring Copilot to generate markdown issue files from assessment source files. Nate Waddington advised restricting Copilot strictly to the designated assessment files rather than general KubeVirt repository knowledge to prevent over-generating incorrect issues (00:11:00) (00:27:09). Nate Waddington directed Bruce Hamilton to scope individual issues to a duration of two to four hours for a technical writer with KubeVirt context, referencing Issue 221 for standard

formatting (00:12:25). Furthermore, Bruce Hamilton was instructed to submit all generated issue files as a single pull request within an issues folder under the KubeVirt assessment, while Nate Waddington would manage automated uploads to GitHub (00:28:18).

Open-Source Repository Transparency Policy: Bruce Hamilton questioned whether the `kubevirt-work` repository should be private to prevent outside observation. Nate Waddington strongly reaffirmed that under the Cloud Native Computing Foundation open-source ethos, all code, documentation, and project work must be maintained in public repositories, with private repositories reserved exclusively for internal staff operations (00:16:32). Nate Waddington noted that if external companies adopt their open-source methods, it successfully fulfills the project goal of building and sharing community best practices (00:18:42).

Review of Flatcar Documentation Issues and Tracker Updates: Nate Waddington shared their screen to review existing documentation issues in the Flatcar repository, noting a total of 10 issues (numbered 80 through 83) (00:21:56). Bruce Hamilton reported that an updated quick start guide for Flatcar, developed by Seth over several

weeks, was still awaiting merger (00:24:21). Following this review, Nate Waddington updated the technical documentation assistance tracker to incorporate the Flatcar and KubeVirt assessments, mentioning that Helm analysis tracking still needed to be added (00:25:50).

Bundling Recommendations and Technical Writer Oversight: Addressing the approximately 115 recommendations generated in the assessment, Nate Waddington clarified that not every recommendation should be turned into an individual GitHub issue to avoid flooding the KubeVirt project. Nate Waddington recommended that Copilot bundle related recommendations into overarching sections or umbrella issues containing five to ten actionable items per section (00:29:27) (00:38:10). Nate Waddington emphasized that Bruce Hamilton, leveraging their senior technical writer experience, must review and coach Copilot to ensure issue scopes reflect appropriate half-day workloads (00:30:53).

Implementation of Help Wanted Labels and Clattributor Integration: Nate Waddington instructed Bruce Hamilton to include the `help wanted` label in the front matter of the generated issue templates to signal that maintainers are actively seeking community members to pick up the tasks (00:32:11). Nate Waddington explained that this label integrates with Clattributor (clattributor.dev), a tool that scans Cloud Native Computing Foundation repositories for issues flagged with `help wanted` (00:35:57). Additionally, Nate Waddington suggested incorporating proposed priority labels (low, medium, or high) into the front matter, subject to final review and approval by Andrew (00:34:41) (00:38:10).

Refining Issue Prompts with Large Language Models: Nate Waddington suggested that Bruce Hamilton utilize large language models, such as Copilot or Claude, to assist in writing and refining prompts for issue generation. Nate Waddington recommended feeding the email transcript of their meeting conversation into the AI tool to provide contextual background and procedural details. Finally, Nate Waddington confirmed they would ensure Bruce Hamilton received the Gemini transcript notes and invited Bruce Hamilton to reach out on Tuesday or Wednesday afternoon if any further questions arose (00:39:05).

Worksession - Transcript

00:00:01

Nate Waddington: Oops. Oh, good morning. How are you doing?

Bruce Hamilton: Hi,

Nate Waddington: Um, so yes,

Bruce Hamilton: can you hear me?

Nate Waddington: I can. Can you hear me?

Bruce Hamilton: Okay, good.

Nate Waddington: Okay, good. Um,

Bruce Hamilton: I'm joining you from um my Linux uh laptop. Um I got that um camera to work.

Nate Waddington: oh, excellent. You're coming through.

Bruce Hamilton: It was a setting in Firefox and actually it was some saying some camera something equals true. It should be false and uh it was a minor thing. So, but gosh if you find if you have anyone else I'll send you a Slack message about if you have anyone else with a similar situation.

Nate Waddington: Oh, that would be handy because uh there I know a lot of folks who use Ubuntu and a lot of

Bruce Hamilton: Yeah. So,

Nate Waddington: folks.

Bruce Hamilton: now you can see what I've been doing. Um, so, uh, so I made some prog. Do you want to hear, um,

00:01:16

Nate Waddington: Yeah.

Bruce Hamilton: should I dive in or

Nate Waddington: Yeah. So, so, um, yeah, absolutely. Because I I I merged in your your your analysis PR last yesterday, last night. Um, looked like, uh, Patrice beat me to, um, fixing the, um, preview there for you. Uh, so yeah, how how are things going?

Bruce Hamilton: Good. Um K.

Nate Waddington: Excuse me.

Bruce Hamilton: Um what I did was um I created uh I had I had um CL I mean uh Fable create some temporary markdown files. So I'm going to go ahead and share my screen here. Share window. Okay. Allow. Oh, I see. No. Okay. Um I have to select the window here. Um

Nate Waddington: I would select another window other than the one that Yeah.

Bruce Hamilton: Oh, yeah. It says meet.

Nate Waddington: So, what I what I do for this is I keep uh one window with one tab open and that's my meet tab and I'll usually like like put it somewhere on the screen and then I'll open another window for the stuff that I want to show and that's that's the um that's the window that shows

00:02:43

Bruce Hamilton: Okay.

Nate Waddington: way and that'll uh u prevent the uh the internet error effect.

Bruce Hamilton: Okay. So now I have this dialogue. I see you and you see me but a part of the screen says you are presenting show your entire screen or browser window can cause an infinity mirror.

Nate Waddington: Yeah.

Bruce Hamilton: Oh,

Nate Waddington: And that's and that's why I'm saying you want to select a another window, not your whole screen.

Bruce Hamilton: right.

Nate Waddington: Right.

Bruce Hamilton: Okay.

Nate Waddington: So that's why like like what is it? command N for a new window in Firefox and then share that. Um or uh the other thing I sometimes do is um if I want my entire

Bruce Hamilton: Oh, I see.

Nate Waddington: screen, I've got I've got this set up because I've got a laptop, so I've got two screens. I'll keep my meet screen on my laptop screen and then share the the screen um like the whole monitor of my other of my other monitor.

Bruce Hamilton: right? So, I have um the meat now.

00:03:50

Bruce Hamilton: I need to like add another window here. Let me try again.

Nate Waddington: That looks better.

Bruce Hamilton: Okay.

Nate Waddington: There we are. Cool.

Bruce Hamilton: Yeah. Go. So, I'm I'm just showing you I just selected one window now. I don't have a another Google Meet uh window, but anyway. Uh is that color scheme? Okay.

Nate Waddington: Sure. Yeah,

Bruce Hamilton: Okay.

Nate Waddington: I can read it.

Bruce Hamilton: So, um this is my KubeVirtuh work um

Nate Waddington: Sure.

Bruce Hamilton: repo and It created um it created

Nate Waddington: Yep.

Bruce Hamilton: these temporary files here and these are just what this is this is a template of what uh the KubeVirtteam has for their u an issue for their

Nate Waddington: Excellent.

Bruce Hamilton: doc issues.

Nate Waddington: Okay.

Bruce Hamilton: And so what I had AI created these files about 12 of them and all of these ones are they ranked as do right away but we're going to you know we're going to make this critical urgent.

Nate Waddington: Yeah.

00:05:29

Bruce Hamilton: So for so what I haven't done I haven't automated you know going up into uh the GitHub. So all I've done uh

Nate Waddington: Well, that's that's that that's something I'll do. Don't don't don't worry about automating up into GitHub.

Bruce Hamilton: Okay.

Nate Waddington: That's that's that's on my plate.

Bruce Hamilton: Okay. So this will just create it now. Um,

Nate Waddington: So, now before we we continue, this is this is the PR template, not the issue template. Yeah.

Bruce Hamilton: yeah. Uh, this right here is a is an issue for a doc issue

Nate Waddington: It says PR. It says pull request.

Bruce Hamilton: err. I'm sorry. What's your question?

Nate Waddington: It's It's not an issue.

Bruce Hamilton: Oh, I'm see. Oh.

Nate Waddington: It's a pull request template.

Bruce Hamilton: Oh, what you need?

Nate Waddington: Right. So, there's a difference between an issue and

Bruce Hamilton: Oh. Oh. Um. Oh. Oh. AI did that. That was it.

00:06:30

Bruce Hamilton: It it AI created this.

Nate Waddington: Oh, it's saying, "Oh, this is Oh,

Bruce Hamilton: That was an issue or something.

Nate Waddington: this is the issues list." Oh, I see. I see. I see. Okay. So, then the the other thing that I'd like to see then for an issue. So, let's go to your issue template. I see it. Cube cube. Doc.

Bruce Hamilton: Right.

Nate Waddington: MD there.

Bruce Hamilton: Okay. Here's the issue template.

Nate Waddington: Okay.

Bruce Hamilton: Now if you have apparently if you have the issue template under folder called issue

Nate Waddington: So,

Bruce Hamilton: template this is what it uses.

Nate Waddington: Perfect. So let's add let's add some front matter to this template. Okay.

Bruce Hamilton: Okay.

Nate Waddington: So at the very beginning because this is a markdown

Bruce Hamilton: Okay.

Nate Waddington: file at the very beginning. So like line one um uh

Bruce Hamilton: Okay.

Nate Waddington: dash and

Bruce Hamilton: Okay.

Nate Waddington: then uh next line I want uh title

00:07:24

Bruce Hamilton: Oh,

Nate Waddington: colonum and then

Bruce Hamilton: okay. Oh, this would be the title.

Nate Waddington: yeah so this is so what we're doing is is we're making something so that I can I can pull it in right so then the next line would be uh description column.

Bruce Hamilton: Okay.

Nate Waddington: And then we're going to then we're going to have labels.

Bruce Hamilton: What else do you label or labels?

Nate Waddington: Uh plural,

Bruce Hamilton: Plural.

Nate Waddington: please. Yeah.

Bruce Hamilton: Okay.

Nate Waddington: I'm also gonna I'm also going to say let's have a repo line. So uh so and that'll be that'll be like where we're going to put it into.

Bruce Hamilton: Okay.

Nate Waddington: Um um I don't think we need much else uh because we're not going to do assignees. We're not going to do type or fields or projects. No milestones. So we're just going to keep it simple there. So yeah. So it's going to be title, description, labels, and then repo.

Bruce Hamilton: Okay,

Nate Waddington: And so,

00:08:35

Bruce Hamilton: I'm going to take this out just for

Nate Waddington: well, no, but let's let's leave that because that's still a part of the cube vert,

Bruce Hamilton: That's true. Okay. Okay. You're right.

Nate Waddington: right?

Bruce Hamilton: You're right.

Nate Waddington: So, let's let's let's leave that. And then the actually, you know what? Take description out of the front matter because this whole thing is the

Bruce Hamilton: Yeah, we already had

Nate Waddington: description. Yeah. So let's take let's take description out of the front matter. No no not there that take it out of the front matter line three right because this whole this whole file other than that

Bruce Hamilton: Okay.

Nate Waddington: is the description.

Bruce Hamilton: Okay.

Nate Waddington: Um, so yeah. So this I think I think with that front matter and the rest of the file I can automate uh uploads to to another thing. Um, and so when you're talking to your co-pilot instruction, right, your co-pilot instruction where you're saying like it's like this is a is is the the template for an issue.

00:09:43

Nate Waddington: And you'd have to tell it, okay, title corresponds to a GitHub issue title labels correspond to GitHub issue labels specifically from this repo. So it should it should go out check which labels exist and only use those labels, right?

Bruce Hamilton: Okay.

Nate Waddington: Uh, and then the anything outside of the front matter when you're talking to co-pilot, like you tell it, anything outside of the front matter is the description field for the issue and has to be in a standard mark or or GitHub flavored markdown.

Bruce Hamilton: Okay. Okay. And then um yeah uh I was uh so now that we have the label here of the priority I created a separate folder of urgent so they can all be in one folder for you. Right.

Nate Waddington: Well, I wouldn't I wouldn't I wouldn't necessarily break that into folders because that's what the labels are for.

Bruce Hamilton: Right. So okay I just did this temporarily.

Nate Waddington: Yeah.

Bruce Hamilton: So for for your work it'll just be in kubevirtwork issue sources.

Nate Waddington: There you go. Yeah.

00:11:00

Bruce Hamilton: Okay, they all be they will be okay. Um, I'm going to uh show you my prompt that I use for open

Nate Waddington: Yes.

Bruce Hamilton: recent.

Nate Waddington: There we go.

Bruce Hamilton: Okay,

Nate Waddington: And this is where you would do what I was just talking about.

Bruce Hamilton: this is the this is what I asked um AI to do last night.

Nate Waddington: Yeah.

Bruce Hamilton: So, create markdown files and then uh the sources. Yeah, this is um yeah, I can I can easily work in, you know, putting the front pattern here.

Nate Waddington: I wouldn't I wouldn't I wouldn't give it the so for the sources, Right. We're specifically saying that we want it to look at the the the two files specifically and only, right? Because we're generating issues from your uh from your work.

Bruce Hamilton: Yeah.

Nate Waddington: And so when you're saying, hey, and your knowledge of the cube repo,

Bruce Hamilton: Yeah.

Nate Waddington: we don't want it to do any of that because that means it's going off and saying, oh, well, this is an issue.

00:12:25

Nate Waddington: This is an issue. This is it'll over it'll it'll it'll it'll over u it'll yeah

Bruce Hamilton: Good point.

Nate Waddington: um so it's just those two folders or just those two files

Bruce Hamilton: Okay.

Nate Waddington: uh and it should be um create uh issues um from the pros right uh and give it give it like a scope right say

Bruce Hamilton: Yeah. Okay.

Nate Waddington: Okay. Um issues should be uh scoped to four to six hours for somebody who has uh context of KubeVirtu some technical writing skill. Um right like like we need to tell it like these these issues need to be um uh yeah the other thing I would do uh is I would remember that issue that I that

Bruce Hamilton: There's no

Nate Waddington: that that um that uh where is it? Where's my tech doc assistance tracker? I would actually point it here. I'm going to send you a link issue 221. I would tell it, hey, have a look at how previous humans have organized these issues by looking at this issue,

00:14:00

Bruce Hamilton: Okay, I'm gonna Where's my

Nate Waddington: right?

Bruce Hamilton: meat? I need Do I need to How do I get back to my meat? Uh,

Nate Waddington: Uh, control tab or command tab. Alt tab.

Bruce Hamilton: okay.

Nate Waddington: Um,

Bruce Hamilton: Okay. Oh. Where's Oh, is that it? Okay, now here's the

Nate Waddington: Right?

Bruce Hamilton: Okay.

Nate Waddington: Because we have we have a very specific sort of thing that we want it to do. We want it to look like every other one, but we want the scope to be better. Right?

Bruce Hamilton: Yeah.

Nate Waddington: Um maybe maybe the scope should be like two to four hours rather than four to six. Um, maybe,

Bruce Hamilton: Okay.

Nate Waddington: you know what I mean though? like we need to tell it how long it should like each each each thing should should take. Uh but we want it to create like an umbrella issue and like other issues right now. That's maybe something that I can do on the on the update side.

00:15:12

Nate Waddington: Um but when you're creating these issues like we want the AI to as much as possible follow sort of human the human conventions that we've that we've already built out right did we did we do a bunch of issues for flat car or did we

Bruce Hamilton: Uh we did I I put some in. Um yeah. Uh, and they

Nate Waddington: That's right. It wasn't on the what? What? It was on which which repo was that in? Because that wasn't on I remember it wasn't on the um that's right. It was documentation issues on the main flat car site, right?

Bruce Hamilton: right. And there were um, yeah, I I bring them up. Um they were basically um yeah I created a whole a whole bunch of them that were like um I created an umbrella issue and sub issues. Um yeah,

Nate Waddington: Yeah.

Bruce Hamilton: but for the these purposes now you just need um you just need all individual issues, right?

Nate Waddington: Yeah.

Bruce Hamilton: Because we we can

Nate Waddington: Those be all individual issues and then then my system will create the umbrella issue but I still want but I still want it

00:16:32

Bruce Hamilton: Okay. And that

Nate Waddington: to um what's your what's your GitHub again? I Rainbow Rain,

Bruce Hamilton: I raindrop

Nate Waddington: right?

Bruce Hamilton: And then Cubert Cubert work is what I use. Oh, by the way, that's that's a public repo. Is that okay? Should that be private?

Nate Waddington: Sorry,

Bruce Hamilton: Um,

Nate Waddington: which everything should be public. Everything we do is in the open.

Bruce Hamilton: what? Everything is public. Okay.

Nate Waddington: Everything we do is in the open.

Bruce Hamilton: Everything we do is what?

Nate Waddington: Everything should be public.

Bruce Hamilton: Viewable.

Nate Waddington: Everything is Everything we do should be in the open.

Bruce Hamilton: Okay.

Nate Waddington: There's no We don't We the The only the only things that should be in like private repositories are like secrets. Uh, and when I say secrets, I mean like API

keys and stuff like that. And even that shouldn't be in a private repo. That should be in like a secrets. There's nothing there's nothing that you and I are doing that is is is

00:17:34

Bruce Hamilton: Okay.

Nate Waddington: secret, right? Like we we should be sharing absolutely everything. Um, that's that's like one of the the the core ethos of the the the the

Bruce Hamilton: Gotcha. Okay.

Nate Waddington: foundation is we're open source, right? Um there's there's um we do have a couple of private repos, but they're like staff um like internal like like we we we we give each other issues there privately, right? But most of that winds up being like um like internal ops stuff, right? Like stuff that's like not really intended to be public.

Bruce Hamilton: Okay.

Nate Waddington: Um but for code, for documentation, for anything that we're doing here, um this should all be this should all be public repos.

Bruce Hamilton: Okay.

Nate Waddington: Yeah.

Bruce Hamilton: Okay.

Nate Waddington: Yeah.

Bruce Hamilton: Uh Right.

Nate Waddington: I know it's I know it's awkward to to to work in the because I mean no nobody wants to make a mistake in public, but it's not like a like it's it's it's incremental um work, right? Like we just we we we we do our work.

00:18:42

Nate Waddington: I know I know some people it's like awkward at first, but it's you get used to it,

Bruce Hamilton: Okay. Yeah. I was just thinking that like someone could see our automation, what we're doing for and then they say,

Nate Waddington: right?

Bruce Hamilton: "Well, we could do this ourselves.

Nate Waddington: That's exactly Perfect.

Bruce Hamilton: Why do we need to hire?

Nate Waddington: No, that's that's that's that's like if if somebody if somebody from I don't know. I'm just going to pick a Acme uh widgets. Acme cloud native widgets looks at our stuff and says, "Oh, we could totally do this." Great. Because that means they're doing it in a way that the CNCF doesn't have to fund for an open

Bruce Hamilton: Okay.

Nate Waddington: source project. That's that's lovely. That's that's the goal. And that sometimes happens. Like I'll sometimes I'll sometimes wake up after working on a a project for a couple of days and somebody will have solved my problem. They'll have opened a PR and it's like this is this is what you're working on, Nate.

00:19:34

Nate Waddington: Here here's the answer. Um so it's it it it's literally that like like when you're and I know you're a contractor and I know that extra support has like um has as but it like when you're working for the

Bruce Hamilton: Okay.

Nate Waddington: CNCF, we we we give it all away. This is this is um it's it's for the community and uh this is why I spend so much time on this stuff is so that we can share it and build up best practices and and and give it give it away because it's it's it's it's um if we if we don't spend the time to to give it away then another company's going to do it source and that's not us.

Bruce Hamilton: got.

Nate Waddington: That's That's not hard.

Bruce Hamilton: Okay,

Nate Waddington: Um

Bruce Hamilton: I'm going to look at um

Nate Waddington: u So then So I'm just looking at your your your prompt here again. Um

Bruce Hamilton: so right now I dialed up a doc issue, an existing doc issue in KubeVirt.Um this is right now

00:20:41

Nate Waddington: what do you mean?

Bruce Hamilton: um I'm we're looking at an issue a KubeVirtexisting doc issue

Nate Waddington: Oh,

Bruce Hamilton: not created by us.

Nate Waddington: I'm I'm not seeing what you're seeing on your screen. I'm I I can only see uh VS Code.

Bruce Hamilton: Oh. Oh, okay. Uh, let me do um alt tab. So, now Okay, now you see my now you're in VS Code.

Nate Waddington: That might have been VS Code. Yep.

Bruce Hamilton: If I do, do you see it? Do you see the difference screen now?

Nate Waddington: No, still VS Code. I think you're going to have to stop sharing and then share the share the the the thing that you want.

Bruce Hamilton: Okay. Okay.

Nate Waddington: Can you send me a link to the umbrella issue for flat car? Um, I'm not seeing it.

Bruce Hamilton: Yeah. Yeah, I'll do that. Um, okay.

Nate Waddington: I I only see like 10 10 issues. Does that sound right?

Bruce Hamilton: Let's say I need to go to um Where are they?

00:21:56

Nate Waddington: because I'm just going to update I'm just going to update uh my uh assistance issues tracker now so that when you point the system at it it's going to have the um a flat flat color as well.

Bruce Hamilton: Yeah, good. So, um, what am I, um, did you get the flat car issues? I found a file of the abundant text.

Nate Waddington: Um, hold on just a sec here. Uh,

Bruce Hamilton: Then we need to actually go to the flat car site.

Nate Waddington: yeah.

Bruce Hamilton: See them.

Nate Waddington: Blackheart.org, right? Yeah. docs. Do they have a contributing contribute? Um, and so yeah, so here I'm going to share my screen. How's that for a sec? Uh, share screen.

Bruce Hamilton: Okay.

Nate Waddington: Allow. I want to share this. Not this window. No, that's not what I wanted. Stop sharing. I want to share that whole screen. Uh, share entire screen. Okay. So, um, in my, uh, thing here.

00:24:21

Nate Waddington: So, I've got, uh, show my screen anyway.

Bruce Hamilton: Yeah, I can see it.

Nate Waddington: Okay. Good stuff. So I I see these 10 issues right in flat car.

Bruce Hamilton: Mhm.

Nate Waddington: Is this where you put them all?

Bruce Hamilton: Yeah, I remember that. Yeah, those are And those haven't been, you know, I have a I actually have my an issue for an updated quick start, you know, flat car has been merged yet and I keep on checking. They haven't merged it yet.

Nate Waddington: Oh,

Bruce Hamilton: It's really great.

Nate Waddington: that's Yeah,

Bruce Hamilton: Can't wait for it to appear. Um,

Nate Waddington: I don't get it.

Bruce Hamilton: and Seth just worked for about a, you know, a few weeks on this. I mean, didn't really he got sidetracked. Um,

Nate Waddington: Yeah. Well, I'm just going to put these ones in as as is then. Uh uh uh seven eight n that right? Uh, four, five, six, seven, eight, nine, 80 through 83. All right.

00:25:50

Nate Waddington: So then on the on this now we've got um wow K native has been just really going through it haven't they? That's awesome. Um so there we go. So we've got the link to the analysis got a link to contributing. Um uh so there we go. That that's I think now up to date uh with all of the um assessments that we've done. Contribute. Let's see. Tech docs, tech docs, analysis for projects, flat car, cube vert. Um, oh, I've got a few more I need to add too, don't I? Flat car KubeVirtwhen we do it. Um, okay. So, I don't have I've got pess. I've got k native and then I don't have helm. Um I need to do I need to add help. Do we have the um the repository that uh did you do did you do help helm?

Bruce Hamilton: Did I do what? I'm sorry. No.

Nate Waddington: No. Okay. Okay. Well, I'll do that later then, but for now, you can just point it at this.

00:27:09

Nate Waddington: Yeah, that'd be good. Okay. Um, now I can stop sharing.

Bruce Hamilton: So, I can go ahead I'll go ahead and create those. have cloud create those issues.

Nate Waddington: Yep.

Bruce Hamilton: Um those markdown files.

Nate Waddington: Remember remember to have it point at that 221 though to to have a look at like the style of issues. And so we're we're only looking at the the files that you created and we're asking it, hey, based on this assessment, pull out issues that are actionable to solve the the problems in the assessment highlighted in the assessment.

Bruce Hamilton: Okay.

Nate Waddington: Yeah. Okay.

Bruce Hamilton: Great. And uh yeah, you'll you'll do all the magic of uploading to GitHub.

Nate Waddington: And I'll I'll do all the magic. Yeah. So, just make sure that it's got that uh that that that that front matter in there and tell it that like okay, the the body is the description and then I'll uh hold on a sec.

Bruce Hamilton: I'm curious if up you can uh upload a GitHub and envir you can do like

00:28:18

Nate Waddington: Excuse me. Sorry.

Bruce Hamilton: GitHub then the the path to the issue file and it I got a access deny to try and do that from a prompt and

Nate Waddington: So,

Bruce Hamilton: from a CLI prompt is dogithub issue template slashKubeVirtOh,

Nate Waddington: yeah, I would I would just download the template rather than pointing it to GitHub. Uh,

Bruce Hamilton: okay.

Nate Waddington: and the other thing is this this needs to go into your um the flat car folder, right? So this this work I know you're doing it somewhere where else but like the issues files should go into like an issues folder under your u your uh KubeVirt

Bruce Hamilton: Okay.

Nate Waddington: um assessment uh as a PR that way that

Bruce Hamilton: Okay.

Nate Waddington: way we can share the the PR with um with um uh Andrew and say okay this is um uh so I mean even if it's like 20 files that's fine Um, but each file has to have that that front matter and then the issue body.

Bruce Hamilton: So you want to PR of all these files in Yeah.

00:29:27

Nate Waddington: Yeah, just one VR though.

Bruce Hamilton: Okay.

Nate Waddington: Just like one PR with a bunch of files, but it's got to go into that that that folder.

Bruce Hamilton: So there are um now all of them um I mean there's a if I do all the issues there are there are 115 issues I mean of recommendation

Nate Waddington: That's probably right.

Bruce Hamilton: And so and some of them are high priority and do right. Should I do all of them and

Nate Waddington: Let let's let's have uh co-pilot have a look again look at what we've done as humans right some of those recommendations get bundled into uh like a larger issue right it's like oh this is uh or what we could do is say okay here's here's like sections right here's here's the umbrella

Bruce Hamilton: Oh,

Nate Waddington: issue here's section for this here's a section for this here's a section for this and maybe there's like five or 10 issues per section and maybe those issues each bundle up recommendations, right? A recommendation isn't an issue necessarily, right?

Bruce Hamilton: okay.

00:30:53

Nate Waddington: So, and this is why I'm saying like we have to keep the scope in mind because that sort of tells uh co-pilot like how much stuff to put into an issue, right? Uh and then again you're you're you're you're a a senior technical writer. If you look at an issue and say that's too much work, that's not a half day's work. That's that's your prerogative to tell co-pilot, hey, no, this is you're packing too much stuff in or this isn't really like like an issue. This doesn't really solve the recommendations. Like that's the that's the that's the work that you're doing here with your technical writing experience is coaching co-pilot because like you know you know the the assessment right and you know the recommendations and now what we're doing is trying to communicate that to an audience who is going to um oh the other the other the other label we should put on all of these is help wanted um uh what's the help wanted there in that in that repo. Hold on a second. Uh your user guide um because help if we put help wanted on it.

00:32:11

Nate Waddington: Uh uh

Bruce Hamilton: You pardon that front matter. You mean

Nate Waddington: we should put in the front matter. Yeah. No labels. It should be help wanted and uh documentation I think. Hold on a second. issues labels. Yeah. Help. It's just help wanted. And then Yeah. And then uh SIG SIG documentation, I think.

Bruce Hamilton: Let me

Nate Waddington: That's something I can do on my side, too. So, do you think you have enough to to to have a go?

Bruce Hamilton: So yeah, um just um on that front matter. Um, okay. Where's that? Uh, let me dial up our um, where is it? Oh, wrong Q. One second here. Oh, issue sources. And which one second here?

Nate Waddington: Mhm.

Bruce Hamilton: Oh, I had that front matter.

Nate Waddington: There's your issues template.

Bruce Hamilton: Yeah, that we worked out this morning.

Nate Waddington: Yep. I would just make a note as as a part of as a part of your instruction to to to co-pilot.

00:34:41

Nate Waddington: to say all of these issues should be u help wanted as a as a label.

Bruce Hamilton: L1 documentation

Nate Waddington: Uh so help wanted discreetly. So quote help space wanted spa quote and then I think probably I'm gonna have to talk to Andrew about creating a docs label. So let's just leave it at help wanted for now. and any any and and and any like the other the other thing is the the priority. So that's another conversation that we're gonna have to have with with um Andrew, but we can make it suggest a priority label as well.

Bruce Hamilton: Um the help wanted what what's that purpose for again? Is that whose help do we do we want?

Nate Waddington: So, a help wanted label on any open source repository usually means we're looking for somebody to do this, right? The maintainers maybe don't have time, but a help wanted uh means we're actively looking for somebody to pick this up, right?

Bruce Hamilton: Oh,

Nate Waddington: Please help us.

Bruce Hamilton: I see.

Nate Waddington: We're not going to do it ourselves.

00:35:57

Nate Waddington: Uh good first issue. by contrast is also help wanted, but uh it's a it's a it's a a more straightforward task. And the maintainers will usually say, "Okay, if you're if you're picking up a good first issue, we'll help you set up your environment. We'll walk you through some stuff. Maybe we'll we'll have some more time to have a conversation about getting you up and running." Right now the reason I want help wanted on it is because of a a tool we have called clattributor. Uh here let me contributor.dev. Um so clattributor.dev goes through all CNCF repositories looking for uh issues flagged help wanted. Um, and so the code tributor uh dev,

Bruce Hamilton: Okay.

Nate Waddington: if if you look at uh uh if you search for docs, there's um anything with with help wanted and docs flagged as a label will show up when you search for for for docs. Um or right. So, um, uh,

Bruce Hamilton: Okay.

Nate Waddington: so here's actually a better better search here with with with the with the filtering.

00:37:13

Nate Waddington: Um, but it only ever shows up in contributor if you have help wanted flagged. Um, and I'm I'm I've been trying to get So, if you're ever if you're ever bored one day and I've got nothing to do, um, you can take a look at CL Tributor and see, oh, here's a a list of things that somebody wants done, right?

Bruce Hamilton: So um do you want uh in the front matter help space one colon space docs?

Nate Waddington: Don't put the docs in yet because we don't know.

Bruce Hamilton: Okay.

Nate Waddington: Oh,

Bruce Hamilton: Okay.

Nate Waddington: I have to talk to I don't think I don't I don't think I don't think it's uh I don't think they've got that

Bruce Hamilton: Okay.

Nate Waddington: label, but they definitely have help wanted. So,

Bruce Hamilton: Okay.

Nate Waddington: we'll start with help wanted uh and then I'll talk to Andrew about So,

Bruce Hamilton: Good.

Nate Waddington: again, remember we also want to suggest priority, right?

Bruce Hamilton: Right.

Nate Waddington: So, in the labels there, it should be I don't know, low, medium, high, right?

00:38:10

Nate Waddington: uh and then we'll have to map that to whatever the the the labels are in cube for low, medium, high, priority, but that's that's a discussion. I wouldn't I wouldn't presume to make labels for cube vert, right? That's not my So,

Bruce Hamilton: Yeah.

Nate Waddington: I have to like we can make that suggestion and then Andrew can be like, nope, it's either low or high and which case we have to make a change, which is fine. Um but

Bruce Hamilton: So when um okay uh I got you to sum up I think I uh I'm going to ask uh a AI to create all these issue files. Now there like 115 of them. So I say okay we don't want all these recommendations.

Nate Waddington: Oh, well I dis I disagree.

Bruce Hamilton: We want you to decide which are the issues.

Nate Waddington: Disagree with you.

Bruce Hamilton: Right.

Nate Waddington: Exactly. So that's that. That's the that's the thing it needs to do. Not every recommendation is an issue,

Bruce Hamilton: That's right.

Nate Waddington: right?

00:39:05

Nate Waddington: Uh and and so several recommendations may be bundled up depending on the topic, the size of the the recommendation, what needs to be done, right? We shouldn't have a hundred issues created here. That would be too many issues that we would we would flood cube and that would be unhelpful, right?

Bruce Hamilton: Right.

Nate Waddington: So, and what you might actually want to do as a part of the you might want to take the transcript you're going to get by email of this conversation. You may want to add that to your your your um uh prompt to help give it context, right? What you might want to do is have an LLM that have co-pilot help you build a prompt based on this conversation and what we've been discussing, right? Um, and what you know of your process and say to co-pilot, hey, help me write a prompt that will build out these issues. Right? And then so you're not like like again because there's like all these little details and niggly stuff. So it'll catch that even if you maybe haven't recalled it, right?

00:40:26

Nate Waddington: So you might want to say, "Hey," and and that's one of the things I I quite like about Copilot is you can use Copilot or Claude or whatever to to help you build um prompts for other tasks. Uh LLMs are real good at writing prompts.

Bruce Hamilton: Yeah.

Nate Waddington: So that's that's maybe something you you look into.

Bruce Hamilton: Okay. So, after this um you'll send me uh an update. You'll have the it'll have a transcript of this in a while.

Nate Waddington: Yeah. Like because um Gemini should send because it's taking notes is transcribing.

Bruce Hamilton: I don't get notes each time.

Nate Waddington: Um okay,

Bruce Hamilton: We meet.

Nate Waddington: let me um I'll make sure that you get it. Um, it usually takes a little while for it to to come out. Um,

Bruce Hamilton: Sure.

Nate Waddington: uh, but I'll I'll I'll I'll either forward it to you or set it so that it sends it to you itself.

Bruce Hamilton: Okay.

Nate Waddington: Okay. Why won't it Okay.

Bruce Hamilton: All right.

Nate Waddington: All right. Like I said, do you have do you think you got enough to to have a go?

Bruce Hamilton: Yeah. Yeah.

Nate Waddington: Okay.

Bruce Hamilton: Okay.

Nate Waddington: Awesome. Uh, and ping me maybe this afternoon or actually I'm I'm off on Monday. Uh, ping me on maybe Tuesday or this afternoon if you've got any other questions. I'd be happy to happy to help them.

Bruce Hamilton: Okay.

Nate Waddington: Yeah. Okay. Thank you, Bruce.

Bruce Hamilton: All right.

Nate Waddington: Have a fun one.

Bruce Hamilton: Yeah, I will.

Nate Waddington: This is This is We're getting down really short strokes on this one now.

Bruce Hamilton: I will. Okay,

Nate Waddington: All right.

Bruce Hamilton: good.

Nate Waddington: Take care. Byebye.
